EDUCATION

In Progress

M.S. Computer Science
C.S.U., Long Beach

2015 - 2020

B.S. Computer Science.
C.S.U., Long Beach

General Computer Science education, concluded with a 1 year long senior project. My senior project was an android app, Google Maps clone strictly for the school campus. The application included features such as authentication, bug reports, maintenance reports, path finding, interactive map, "street views" (360degree photos), and many other smaller capabilites.

CLAYTON ASADA

Garden Grove, CA — (916) 801 6154 — Casada94@gmail.com

PROFILE

Software Engineer with strong fundamentals and an absolute passion for growth and development.

Currently specializing in backend development, creating high security and high availability java applications leveraging Spring Boot, Kafka, and RabbitMQ, deployed on AWS, RedHat OpenShift or distributed Unix systems.

WORK EXPERIENCE

Java Developer — Mar 21 - NOW
TCS employee; Experian contract

A company wide modernization project, involving rewriting legacy code to leverage new technologies, features, and frameworks

- Enhancement of application feature set, recreating legacy C code into Java, and creating new features to meet business requirements
- Designed and developed a replacement for a cron job java application, utilizing Spring Boot to more reliably process and publish records to Splunk.
- Designed and developed a new Spring Boot application which consumes many different types of records from RabbitMQ, encrypts specific data depending on the type of records, and publishes to Kafka asynchronously
- Production support and maintenance of various other applications

Technologies include:

- Spring Boot, Kafka, REST API, SafeNet, MySQL, AWS
- Spring Boot, Splunk, DB2, RedHat OpenShift
- Spring Boot, RabbitMQ, Kafka, SafeNet, OracleDB, Jenkins, Unix
- Unix, Putty, WinSCP, SqlDeveloper, Splunk, RedHat OpenShift

Achievements include:

- Increased the feature set from 7 to 9, increasing the daily records processed count by millions
- Greatly improved the reliability of the application by reducing resource thrashing, and maintaining the flow of 10's of thousands of records per minute
- Added new capabilities for testing future test-driven development
- Removed various bugs and flaws of legacy applications and ensure our customers have maximal up-time of the available products

Electrical Systems Technician — Jul 12 - Sep 15
United State Marine Corps
