

SKILLS

Java 13+	2.5+ yrs
SQL	2.5+ yrs
C++	1+ yrs
Spring Boot	2.5+ yrs
Kafka	2 yrs
RabbitMQ	2 yrs
Splunk	2 yrs

TOOLS

Intellij	3+ yrs
Git/BitBucket	3+ yrs
Atlassian Jira	2 yrs
Confluence	2 yrs
Jenkins	2 yrs
VeraCode	2 yrs

EDUCATION

08/15/2022 - 05/15/2024

M.S. Computer Science
C.S.U., Long Beach

08/15/2015 - 05/15/2020

B.S. Computer Science.
C.S.U., Long Beach

General Computer Science education, concluding with a 1 year long project. My project was an android app, Google Maps clone strictly for the school campus. The application included features such as authentication, bug reports, maintenance reports, path finding, interactive map, "street views" (360degree photos), and many other smaller capabilites.

CLAYTON ASADA

Garden Grove, CA — (916) 801 6154 — Casada94@gmail.com

PROFILE

I'm a highly motivated, self-driven software engineer with two and a half years experience developing Java Spring Boot applications in the credit industry. My current role is focused on backend development of highly available and secure microservices which process millions of unique events every day, deployed on AWS, RedHat OpenShift or distributed Unix Systems. Recently, in my free time, I've been learning frontend development(React).

WORK EXPERIENCE

Java Developer (50hrs/week) 03/15/2021 - Present
TCS employee; Experian contract

Drive progress in a company-wide modernization and migration project leveraging new technologies, language features, and frameworks.

- Enhance and maintain current applications created by my predecessors to meet new business goals, fix implementation errors, and mitigate vulnerabilites
- Design, develop, and maintain new applications, including database tables, for AWS cloud deployment
- Work directly with Experian clients and their technical teams for API integration, testing, and go-live

Technologies include:

AWS, Kafka, Docker, RedHat OpenShift, RabbitMQ, Jenkins, Java, MySql, Veracode, Spring Boot, OracleDB, Unix

Achievements include:

- My Hackathon idea, inspired by customer conversions, lead to implementation, completed by me, which increased yearly revenue by $800,000 (16%)
- Designed and developed 13 new microservices to completely replace legacy systems
- Performance improvements of two legacy applications, resulting in 50% reduction in latency
- Created and shared new testing techniques and technologies across development teams
- Enhanced, maintained, and mitigated vulnerabilites of 22 legacy applications

Electrical Systems Technician 07/-1/2012 - 09/01/2015
United State Marine Corps
