

SKILLS

Java 13+	2+ yrs
SQL	2+ yrs
C++	1+ yrs
Spring Boot	2 yrs
Kafka	2 yrs
RabbitMQ	2 yrs
Splunk	2 yrs

TOOLS

Intellij	3+ yrs
Git/BitBucket	3+ yrs
Atlassian Jira	2 yrs
Confluence	2 yrs
Jenkins	2 yrs
VeraCode	2 yrs

EDUCATION

In Progress

M.S. Computer Science
C.S.U., Long Beach

2015 - 2020

B.S. Computer Science.
C.S.U., Long Beach

General Computer Science education, concluding with a 1 year long project. My project was an android app, Google Maps clone strictly for the school campus. The application included features such as authentication, bug reports, maintenance reports, path finding, interactive map, "street views" (360degree photos), and many other smaller capabilites.

CLAYTON ASADA

Garden Grove, CA — (916) 801 6154 — Casada94@gmail.com

PROFILE

Software Engineer with strong fundamentals and an absolute passion for growth and development.

Currently specializing in backend development, creating high security and high availability java applications leveraging Spring Boot, Kafka, and RabbitMQ, deployed on AWS, RedHat OpenShift or distributed Unix systems.

WORK EXPERIENCE

Java Developer — Mar 21 - Present
TCS employee; Experian contract

A company wide modernization project, involving rewriting legacy code to leverage new technologies, features, and frameworks

- Built new features for the main revenue generating application based on my Hackathon idea, now generating an additional $800K in revenue
- Achieved higher reliably and publishing throughput by utilizing Spring Boot to replace a legacy cron job application suffering performance issues
- Designed and developed a new Spring Boot application which consumes many different types of records from RabbitMQ, encrypts specific data depending on the type of records, and publishes to Kafka asynchronously

Technologies include:

- Spring Boot, Kafka, REST API, SafeNet, MySQL, AWS
- Spring Boot, Splunk, DB2, RedHat OpenShift
- Spring Boot, RabbitMQ, Kafka, SafeNet, OracleDB, Jenkins, Unix
- Unix, Putty, WinSCP, SqlDeveloper, Splunk, RedHat OpenShift

Achievements include:

- Increased the feature set and revenue, both by many 10's of thousands.
- Greatly improved the reliability of an application by reducing resource thrashing, and maintaining high thoughput of records per minute
- Added new test-driven development capabilities
- Removed various bugs and flaws of legacy applications and ensure our customers have maximal up-time of the available products

Electrical Systems Technician — Jul 12 - Sep 15
United State Marine Corps
